

Netistix Signs Distribution Deal with Wireless SAMS

Ottawa, February 14, 2006. Netistix Technologies, a Canadian company at the forefront of wireless fleet vehicle telematics, today announced another in a series of distribution agreements. The distribution agreement announced today is with Wireless S.A.M.S. (Security and Asset Management Solutions).

Wireless SAMS is a preferred channel of distribution for suppliers of wireless security and asset management solutions worldwide. Under the agreement, the company will be distributing the Netistix FleetPulse vehicle telematics product in the United States.

FleetPulse is a device that once plugged into a vehicle's on board diagnostic port (OBD) collects information on various aspects of the vehicle's performance. The data is then relayed wirelessly to the customer's network where managers can review and collect data on a single vehicle or an entire fleet and schedule maintenance or other tasks as required.

Fleetpulse complements the Wireless S.A.M.S. product mix, which-needed an OBDII – WiFi based solution for customers.

Gord Echlin, CEO of Netistix Technologies commented on the agreement with Wireless SAMS. "We are very pleased to have Fleetpulse join the product offering of Wireless SAMS. They are a proven and successful supplier of wireless security and asset management solutions and we are delighted to be associated with them."

About Netistix Technologies

Netistix Technologies Corporation develops, markets and sells innovative vehicle relationship management (VRM) systems for businesses that have significant fleet operations, including fleet management companies and their repair service providers. The FleetPulse solution helps reduce the total cost of ownership for fleet operations by blending vehicle diagnostics, web services and Wi-Fi capabilities. Netistix is privately owned and operated from headquarters in Kanata, Ontario – Canada's Silicon Valley North. The Branham Group has named Netistix to their 2005 list of Top 25 Up and Coming technology companies in Canada. Netistix is lead by a seasoned management and advisory team.
